TA-65 Tested:

TA-65® Is a registered trademark of Telomerase Activation Sciences, Inc.
RevGenetics has tested TA-65 for various materials to find out what ingredient activates telomerase in the product.

The attached report is by an Internationally Recognized ISO17025 Laboratory. The Report (COA) shows the contents of the specific ingredients in TA-65 that are the ones covered by the Geron patent and licensed to TA Sciences.

Geron Patent, TA-65 and Generic Products:

Geron has patented the method of activating telomerase using Cycloastragenol and has licensed it to TA Sciences, inc. This means that the Cycloastragenol based product called TA-65 is the only product that can make the “Telomerase Activation” claim using Cycloastragenol.

Other Products: There are currently 3rd party products available as low as \$32.50 a bottle, that have the same amount of Cycloastragenol as TA-65. They simply cannot claim “Telomerase Activation” because of the method patent **but can easily work just as well** as the branded Cycloastragenol product called TA-65.

Please sign up to be notified of RevGenetics recommendations on Cycloastragenol products that do not claim “Telomerase Activation” but may work as effectively as TA-65. As a bonus, you may also win a bottle of TA-65 or other Cycloastragneol based product in our monthly drawing: <http://eepurl.com/iq68I>

Astragalus Comparisions:

Since 2010, we have further tested TA-65 material in human cells, and compared it to concentrations of Astragalus that are not covered by Geron’s patent. We tested Organic Astragalus, Astragalus extract at a 25:1 concentration, as well as Atragalus extract at a very high concentration of 50:1 (where 50kg produce a single kilo of material). These extracts showed that they contained some of the same ingredients in small amounts.

Surprisingly, we have found that the high concentrations of astragalus do not statistically activate telomerase in cells, while TA-65 continued to statistically activate telomerase in human cells.

Independent Studies:

The Cycloastragenol based product TA-65, has been proven to be a telomerase activator according to different studies. Internally, we have tested it here at RevGenetics in human cells, and have found that the findings are correct as well. The Cycloastragenol based product called TA-65 is simply the product that has the most independent studies available, that support the claims per the Geron patent.

Our Current Recommendation For Telomerase Activation:

At this time, we have tested many ingredients that suggest they activate telomerase in human cells. Up until now, the most powerful product that is being sold, and that has been tested safe is Cycloastragenol which is found in TA-65 and other products. While Nicotine may activate telomerase, we do not suggest it, as in studies it increases the incidence of cancer. In a recent animal study using animals, the Cycloastragenol based product called TA-65 is shown to be safe and not increase the incidence of cancer. It is because of this safety study that we recommend Cycloastragenol based products like TA-65 to our customers at this time. Nicotine and other telomerase activators that have not been tested, should simply be avoided unless they are tested safe.

Why Take Cycloastragenol based products like TA-65?

RevGenetics has decided to provide the Cycloastragenol based TA-65 to its customers, as our customers demand safety, product claims, independent testing and quality.

While Telomerase Activators have not provided any studies on animal models that show an extension of lifespan like other products such as [Stem Cell 100](#) or [C60 Olive Oil](#), we believe Cycloastragenol products are currently the best product at this time that complies with the strongest telomerase activation that is safe and available that a supplement can provide.

We hope that you will agree.

Where to buy Cycloastragenol based TA-65:

You can purchase TA-65 at our website today or by Phone (1-888-738-4363):
